Sequence 3, Application US/09123624

Patent No. 614936

GENERAL INPORMATION:

APPLICANT: GCHRADER, Jurgen

TITLE OF INVENTION: TREATMENT OF VASCULAR DISORDERS

FILE REPERROR: 511169-2004

CURRENT APPLICATION NUMBER: US/09/123,624

CURRENT FILING DATE: 1998-07-28

PRIOR FILING DATE: 1996-03-01

PRIOR FILING DATE: 1996-03-01

PRIOR FILING DATE: 1994-03-31

NUMBER OF SEQ ID NOS: 6

SOFTWARE PATENTIN Ver: 2.1

Patent No. 6569618
GENERAL INFORMATION:
APPLICANT: YASUE, Hirofumi
APPLICANT: YOSHIMURA, Kumamoto
TITLE OF INVENTION: DIAGNOSIS OF DISEASES ASSOCIATED WITH CORONARY
TITLE OF INVENTION: TWITCHING
FILE REFERENCE: 0032-245P
CURRENT APPLICATION NUMBER: US/09/068,506A
CURRENT FILING DATE: 1998-07-10
NUMBER OF SEQ ID NOS: 72
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                APPLICANT: Jaffee Au-Young
APPLICANT: Jeffrey J. Seilhamer
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING
TITLE OF INVENTION: PATHWAY GENE EXPRESSION
NUMBER OF SEQUENCES: 1490

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 5, Application US/08896053
Patent No. 6720309
GENERAL INFORMATION:
APPLICANT: Janssens, Stefans
APPLICANT: Bloch, Kenneth D.
APPLICANT: Collen, D sir
TITLE OF INVENTION: Method of Inducing Vasodilation and
TITLE OF INVENTION: Transfer of the Nitric Oxide Synthase Gene
TITLE OF SEQUENCES: 5
CORRESPONDENCE ADDRESS:
ADDRESSEE: Sterne, Kessler, Goldstein & Fox P.L.L.C.
STREET: 1100 New York Ave., N.W., Suite 600

Sequence 5, Application US/09123624

Patent No. 614996

GENERAL INFORMATION:

APPLICANT: SCHRADER, Jurgen

APPLICANT: SCHRADER, Jurgen

APPLICANT: GODGCKE, Axel

TITLE OF INVENTION: TREATMENT OF VASCULAR DISORDERS

FILE REPRESENCE: 511169-2004

CURRENT APPLICATION NUMBER: US/09/123,624

CURRENT APPLICATION NUMBER: 08/553,503

PRIOR APPLICATION NUMBER: 4411402.8

PRIOR PILING DATE: 1994-03-31
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61 GGCTACCAGATGCCAGATGGCAGCATCAGAGGGGACCCTGCCAACGTGGAATTCACTCAG 120

Patent No. US2002017551A1
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: TERMAN, David S
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR TREATMENT OF NEOPLASTIC DISEASE
FILE REFERENCE: 870759
CURRENT APPLICATION NUMBER: US/09/870,759
CURRENT FILING DATE: 2002-01-14
PRIOR PILING DATE: 2000-05-30
NUMBER OF SEQ ID NOS: 166
SOFTWARE: Patentin version 3.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MCS-09-751-708A-123

available for processing searches. generate two sets of results each. The Published_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being Published_Applications Nucleic Acid and Published_Applications Amino Acid database searches now

applications make up the Published_Applications_Main databases. Newly published applications will appear in the Published_Applications_New databases; older published

:rapbm (Published_Applications_AA_Main) and .rapbn (Published_Applications_AA_New) Searches run against Amino Acid Published_Applications produce two sets of results, with the extensions .rnpbm (Published_Applications_NA_Main) and .rnpbn (Published_Applications_NA_New). Searches run against Nucleic Acid Published_Applications produce two sets of results, with the extensions I HIS PAGE BLANK (USPTO)
